

Problem is similar to max. no. of chunks to make
array sorted - 2 \Rightarrow

left partition's length: $\text{index} + 1 = 5 + 1 = 6$

How to solve in $O(n)$ space \rightarrow left max and right min

First time
left max \leftarrow right min
answer is found

array →

8	2	10	6	12	1	16	15	22	12	40
0	1	2	3	<u>4</u>	5	6	7	8	<u>9</u>	10

(A bracket groups elements from index 5 to 7.)
 (An arrow points to index 7.)
 (An arrow points to index 8.)
 (An arrow points to index 10.)

max. in partition
 $\text{leftmax} = 8$ ~~10~~ 12

$\text{maxInRun} = 8$ ~~10~~ ~~12~~ ~~16~~ ~~22~~ 40

$\text{ans} = 0$ ~~1~~ ~~2~~ 5

max. in
 running
window

// to know greater in
 $\text{if}(\text{arr}[i] > \text{maxInRun})$ upcoming
 iterations

$\text{maxInRun} = \text{arr}[i]:$

// To know impact till now
 $\text{if}(\text{arr}[i] < \text{leftmax})$

$\text{ans} = i$
 $\text{leftmax} = \text{maxInRun}$

$\text{Result} = \text{ans} + 1 = 2 + 1 = 6$ length of left
partition

[1,3], [2,6], [8,10], [15,18] ✓

Steps for Solution

- ① Sort the array on the basis of starting
- ② Travel and merge intervals in time-
- ③ convert list into array.

2 platgrm

2

Case-I

$ep1 < sp2 \rightarrow$ No overlapping
[sp1 - ep1] - interval in Result

Case-II

$ep1 > sp2 \rightarrow$ overlapping ✓
 $ep1 < ep2$
 $\underline{ep2} < ep2 \rightarrow$ partial overlapping
update ending point in merging interval

Case-III

$ep1 > sp2 \rightarrow$ overlapping.
 $\rightarrow ep1 > ep2 \rightarrow$ Fully overlapping -
continuation to analyze next starting point
